

Broadband Noise Generator

The ANG series of general purpose noise generators provide up to 1 watt of white Gaussian noise output in several models over the 10Hz to 18GHz frequency range, with custom options to 40GHz and are designed to be used either as laboratory instruments or as built-in system test facilities. The noise, which is diode generated, is amplified and the level can be varied in 1dB steps from 0 to 10dB or optionally in 0.1dB steps from 0 to 111dB. Further standard options are available in addition to the ability to provide custom solutions for particular applications.

Typical applications:

- 10Hz-18GHz
- High Output, up to +30dBm
- White Symmetrical Gaussian Noise
- Test Instrument
- Flat Output
- Fine Attenuation Control
- Standard and Custom Options

General Specification	
Attenuators Ranges	0 to 10dB in 1dB steps (standard) 0 to 100dB in 10dB steps 0 to 1.0dB in 0.1dB steps
RF Output Connector	SMA Female
Front Panel	RF Output Attenuator Control Knobs On/Off Switch
Rear Panel	IEC AC Power Connector AC Power Switch AC Fuse
Operating Temperature	-10+50C
Specification Temperature	+25C
Input Power	80-240V @ 50/60Hz
Instrument Size	14.6 (370) x 4.4 (110) x 11.8 (300) ins. (mm) plus Carry / Tilt handle
Impedance	50 ohm
